LEELAPRASAD R M

SDET | Automation Test Engineer | Java | Selenium | Playwright
8951513146 | LeelaPrasad2710@gmail.com | Bangalore, India

PROFESSIONAL SUMMARY

Results-driven SDET with 4+ years of experience designing and implementing scalable test automation frameworks for enterprise web applications. Proven track record of reducing manual testing effort — including automation bots that saved over 60,000 hours annually. Hands-on expertise in Selenium WebDriver, Playwright, Java, BDD (Cucumber), CI/CD integration (Jenkins/Git), and API testing. Additional exposure to AI-assisted test generation using MCP server and GenAI fundamentals. Experienced across the full SDLC, with strong skills in framework architecture, Page Object Model design, and cross-browser regression testing.

CORE SKILLS

Test Automation: Selenium WebDriver, Playwright, TestNG, Cucumber BDD, Page Object Model (POM)
Programming: Java, SQL, VBA, Groovy
API Testing: Postman, Insomnia — REST API validation, payload, headers, auth, edge cases
CI/CD & DevOps: Jenkins, Git, GitHub — pipeline integration, scheduled regression runs
AI & Emerging: MCP Server integration, AI-assisted test case generation, GenAI/LLM fundamentals
Databases: PostgreSQL, MongoDB, MySQL, SQLite
Tools & IDEs: IntelliJ IDEA, VS Code, Jira, DOMO, Power BI, React

PROFESSIONAL EXPERIENCE

Automation Engineer / Data Analyst | Target Corporation of India | *Dec 2024 – Dec 2025*

- Automated data ingestion pipelines using Python and Jira API to extract, transform, and load data into PostgreSQL, eliminating manual data handling.
- Built internal reporting dashboards using React and REST APIs, enabling real-time business insights and reducing manual reporting cycles by 70%.
- Developed automation scripts to reduce manual data processing effort across multiple internal systems.
- Designed DOMO dashboards using Magic ETL pipelines for business data visualization and analytics.
- AI Chatbot Testing — Employee Self-Service Bot - Designed and executed a structured evaluation framework for an internal AI-powered employee self-service chatbot, assessing 7 quality dimensions: Intent Classification, Response Accuracy, Relevance, Actionability, Context Handling, Risk & Compliance, and Consistency. Validated NLP intent accuracy by testing semantically similar queries to detect misclassification, and cross-verified bot responses against live API and database records to confirm real-time data accuracy.

Lead SDET / Automation Engineer | Target Corporation of India | *2021 – 2024*

- Architected and implemented a Playwright automation framework supporting cross-browser testing (Chrome, Firefox, Edge) for modern enterprise web applications.
- Integrated AI-assisted test case generation using MCP server — automatically created Playwright test cases from application flows, user stories, and UI interactions, reducing test authoring time significantly.
- Built Selenium WebDriver automation scripts in Java with TestNG, cutting manual regression testing effort across releases.
- Implemented BDD automation using Cucumber with Gherkin feature files, aligning test scenarios directly with business requirements.
- Integrated automation suites with Git and Jenkins CI/CD pipelines, enabling scheduled nightly regression runs and immediate pipeline feedback.
- Performed comprehensive API testing using Postman and Insomnia — validated request/response payloads, headers, authentication flows, and edge cases.
- Developed 40+ automation bots and 15+ VBA macros automating operational workflows, saving over 60,000 hours annually — recognised with Leader's Choice Award.

Senior Automation Specialist | **Target Corporation of India** | *2019 – 2021*

- Introduced automation-driven process improvements to reduce repetitive manual operations across finance and operations teams.
- Performed reconciliation and operational analysis, improving process accuracy and identifying efficiency improvements.

General Accounting Associate | **Accenture** | *2018 – 2019*

- Managed SAP invoice processing, reconciliation workflows, and financial compliance tasks.

KEY PROJECTS

Ryder Data Processor (Java)

- Built an end-to-end data processing system in Java using Kafka and MongoDB with DOMO dashboards for real-time visualization and reporting.

JPRA Workflow Automation

- Automated manual operational workflows using Java and Groovy scripts, significantly increasing process efficiency and reducing human error.

Trip Expense Tracker (Personal)

- Full-stack React + PostgreSQL application deployed on Vercel for tracking and managing trip expenses, demonstrating end-to-end development capability.

AI Chatbot Testing — Employee Self-Service Bot (Target Corporation)

Designed and executed a structured evaluation framework for an internal AI-powered employee self-service chatbot, assessing 7 quality dimensions: Intent Classification, Response Accuracy, Relevance, Actionability, Context Handling, Risk & Compliance, and Consistency. Validated NLP intent accuracy by testing semantically similar queries to detect misclassification, and cross-verified bot responses against live API and database records to confirm real-time data accuracy.

ACHIEVEMENTS & AWARDS

- Leader's Choice Award — Automated operational processes saving 60,000+ hours annually across enterprise workflows.
- TII Drive Award — Implemented chatbot integration into internal enterprise platforms, improving user experience and support automation.
- TII Drive Award — Developed automated Python data pipelines for analytics systems, streamlining reporting across business units.

CERTIFICATIONS & TRAINING

- UPTECH Program — Target Corporation (2023) | Advanced technology and leadership development program.
- GenAI & LLM Fundamentals Training — Target Corporation | Foundations of generative AI, prompt engineering, and LLM application.
