

PROFESSIONAL SUMMARY

Results-driven Testing & Evaluation professional with 7 years of experience in automated testing frameworks, UAT, and regression testing for enterprise applications, including 5+ years in hands-on framework architecture. Skilled in applying AI-enabled testing techniques and data-driven testing approaches to increase coverage, improve defect detection, and identify testing trends and risks. Core expertise in Selenium WebDriver, Playwright, Java, JavaScript, BDD (Cucumber), CI/CD (Jenkins/Git), and REST API testing (Postman, Insomnia). Practiced in AI-assisted quality evaluation workflows, using Claude Desktop and Playwright MCP for live DOM inspection and root cause analysis, and GitHub Copilot for accelerated framework development, with all AI-generated output subject to manual review. Strong record of partnering with product, operations and cross-functional technology teams to modernize testing processes.

CORE QUALIFICATIONS

- Experience with automated testing frameworks: architected Playwright (cross-browser) and Selenium WebDriver/Java/TestNG frameworks using Page Object Model design for enterprise web applications.
- Knowledge of AI / data-driven testing approaches: applied AI-assisted locator validation, accessibility review, and root cause/failure analysis using Claude Desktop and Playwright MCP; built a 7-dimension AI chatbot quality evaluation framework (Intent Classification, Response Accuracy, Relevance, Actionability, Context Handling, Risk & Compliance, Consistency).
- Experience supporting UAT and quality assurance activities: executed regression, smoke, and sanity suites; authored test plans, test strategy, and Requirements Traceability Matrix (RTM) documentation.
- Strong collaboration across cross-functional teams: partnered with product, operations, and engineering stakeholders on release cycles, CI/CD pipeline integration, and process modernization.
- Exposure to financial services / regulated environments: managed SAP invoice processing, reconciliation, and financial compliance workflows at Accenture.

TECHNICAL SKILLS

Test Automation & QA: Selenium WebDriver, Playwright, TestNG, Cucumber BDD, UAT Support, Regression/Smoke/Sanity Testing, Page Object Model (POM), Data-Driven Testing

AI-Enabled Testing: Claude Desktop, Playwright MCP (Model Context Protocol), GitHub Copilot, Prompt Engineering, AI-Assisted Defect & Root Cause Analysis, AI-Assisted Test Strategy/Plan/RTM Documentation, GenAI/LLM Fundamentals

Programming Languages: Java (Primary), JavaScript, SQL, VBA, Groovy

API Testing: Postman, Insomnia, Rest Assured — request/response validation, headers, authentication, edge cases

CI/CD & DevOps: Jenkins, Git, GitHub — pipeline integration, scheduled nightly regression runs

Data & Reporting: PostgreSQL, MongoDB, MySQL, DOMO, Power BI

Tools & Platforms: VS Code, IntelliJ IDEA, Jira, Kafka, SAP, Git, Jenkins

Methodologies: Agile/Scrum, SDLC, TDD, BDD, Test Planning, Defect Tracking, Root Cause Analysis

PROFESSIONAL EXPERIENCE

Data Analyst | Target Corporation of India

Dec 2024 – Dec 2025

- Analyzed testing and operations data using Python and Jira REST API pipelines into PostgreSQL, identifying trends and eliminating manual data-handling errors.
- Built React-based reporting dashboards for real-time business insight, reducing manual reporting effort by 70%.
- Designed DOMO dashboards using Magic ETL pipelines to visualize data trends and support stakeholder decision-making.
- Designed and executed a structured AI-enabled chatbot quality evaluation framework, assessing intent classification, response accuracy, relevance, actionability, context handling, risk & compliance, and consistency — applying AI-driven techniques to increase defect detection.

Lead SDET / Automation Engineer | Target Corporation of India

2021 – 2024

- Architected a Playwright automated testing framework supporting cross-browser regression testing (Chrome, Firefox, Edge) for enterprise web applications, improving test coverage by 80%+.
- Applied AI-enabled testing techniques using Claude Desktop and Playwright MCP for live DOM inspection, locator validation, and accessibility review, increasing defect detection and reducing manual DOM guesswork.
- Used GitHub Copilot to accelerate development of reusable automation assets (Page Objects, components, utilities), with all AI-generated code manually reviewed before merge.
- Built a Selenium WebDriver/Java/TestNG framework with POM design, reducing manual regression testing effort across release cycles.
- Implemented BDD automation with Cucumber/Gherkin, aligning automated test scenarios directly with business requirements to support UAT.
- Integrated automation suites with Jenkins CI/CD and Git, enabling scheduled nightly regression runs and real-time pipeline feedback across cross-functional teams.
- Performed REST API testing using Postman and Insomnia, validating request/response payloads, headers, authentication flows, and edge cases.
- Developed 40+ automation bots and 15+ VBA macros, saving over 60,000 hours annually — recognized with the Leader's Choice Award.

Senior Automation Specialist | Target Corporation of India

2019 – 2021

- Introduced automation-driven process improvements, applying data analysis to reduce repetitive manual operations across finance and operations teams.
- Performed data reconciliation and operational analysis, identifying testing/process patterns and efficiency opportunities across multiple business units.

General Accounting Associate | Accenture

2018 – 2019

- Managed SAP invoice processing, reconciliation workflows, and financial compliance tasks in a high-volume, regulated financial-services environment — direct exposure to the audit rigor and control discipline central to banking operations.

KEY PROJECTS

AI-Assisted Enterprise Automation Framework

- Built a production-style Playwright + TypeScript automated testing framework (POM) with reusable UI components.
- Used Claude Desktop for requirement analysis, test strategy, test plan, and RTM creation; Playwright MCP enabled live DOM inspection in place of static or guessed locators.
- Applied prompt engineering to guide AI-assisted accessibility review, locator validation, and root cause analysis, with every AI-generated finding manually verified — increasing defect-detection accuracy.
- Authored Smoke and Sanity suites plus an Automation Architecture document supporting UAT and regression cycles.

Other Projects

- Ryder Data Processor — end-to-end Java data-processing system using Apache Kafka and MongoDB with DOMO dashboards for real-time reporting.
- JPRA Workflow Automation — automated manual operational workflows using Java and Groovy, increasing process efficiency and reducing human error.
- Trip Expense Tracker — full-stack React + PostgreSQL application deployed on Vercel.

ACHIEVEMENTS & AWARDS

- Leader's Choice Award — automated operational processes saving 60,000+ hours annually through RPA
- TII Drive Award — chatbot integration into internal enterprise platforms, improving support and user experience.
- TII Drive Award — automated Python data pipelines for analytics, streamlining reporting across multiple business.

CERTIFICATIONS & TRAINING

- UPTECH Program — Target Corporation (2023): Java Programming and advanced technology and leadership development Training.
- GenAI & LLM Fundamentals Training — Target Corporation: generative AI, prompt engineering, and LLM application development foundations.
